

Division - Year 1

Children must have secure counting skills- being able to confidently count in 2s, 5s and 10s.

Children should be given opportunities to reason about what they notice in number patterns.

Group AND share small quantities- understanding the difference between the two concepts.

Sharing

Develops importance of one-to-one correspondence.

Children should be taught to share using concrete apparatus.

Grouping

Children should apply their counting skills to develop some understanding of grouping.

Use of arrays as a pictorial representation for division.

$15 \div 3 = 5$ There are 5 groups of 3.

$15 \div 5 = 3$ There are 3 groups of 5.

Children should be able to find $\frac{1}{2}$ and $\frac{1}{4}$ and simple fractions of objects, numbers and quantities.

Division - Year 2

\div = signs and missing numbers

$6 \div 2 = \square$ $\square = 6 \div 2$

$6 \div \square = 3$ $3 = 6 \div \square$

$\square \div 2 = 3$ $3 = \square \div 2$

$\square \div \nabla = 3$ $3 = \square \div \nabla$

Know and understand sharing and grouping- introducing children to the \div sign.

Children should continue to use grouping and sharing for division using practical apparatus, arrays and pictorial representations.

Grouping using a numberline

Group from zero in jumps of the divisor to find our 'how many groups of 3 are there in 15?'

$15 \div 3 = 5$

Continue work on arrays. Support children to understand how multiplication and division are inverse. Look at an array – what do you see?

Division - Year 3

\div = signs and missing numbers

Continue using a range of equations as in year 2 but with appropriate numbers.

Grouping

How many 6's are in 30?

$30 \div 6$ can be modelled as:

Becoming more efficient using a numberline

Children need to be able to partition the dividend in different ways.

$48 \div 4 = 12$

Remainders

$49 \div 4 = 12 \text{ r}1$

Sharing – 49 shared between 4. How many left over?
Grouping – How many 4s make 49. How many are left over?

Place value counters can be used to support children apply their knowledge of grouping.

For example:

$60 \div 10 =$ How many groups of 10 in 60?

$600 \div 100 =$ How many groups of 100 in 600?
